

# Internet Explorer Settings for Paragon 3

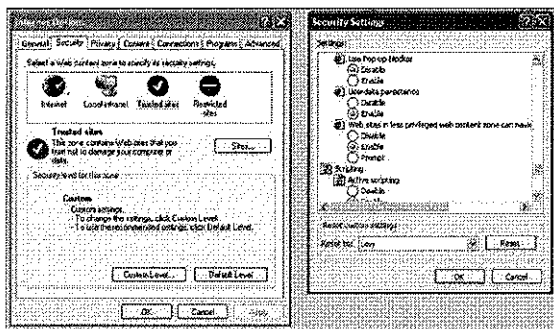

## Setting Up your Computer for Trusted Sites

### While in Internet Explorer

- \* Click on Tools → Internet Options → Security
- \* Click on Trusted Sites → Sites
- \* Uncheck **Require Server Verification (https:)** for all sites for this zone box
- \* Type in **\*.fnismls.com** in **Add Web Site to the Zone**
- \* Click Add and OK
- \* Click on **Default Level (Sets ActiveX to “Enable”)** This sets all settings to Enable or Low Safety.
- \* Click on OK. This brings you back to the Internet Options Dialog box.

## Setting Up Security on your Computer

### Continuing on from above

Next, select the “advanced” tab at the top, scroll down to the HTTP 1.1 Settings section and verify what the next section states. There can be three different cases.

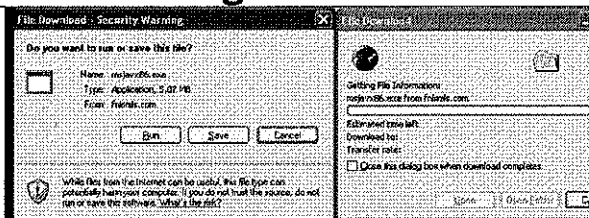

- A. If next section is Java (Sun), Uncheck this box, and go on to steps B and C

If you do not have Sun Java, go on to steps B and C

- B. If the next section is Microsoft (Java) VM, verify the JIT compiler is checked in this section.
- C. If the next section is Multimedia, you will need to install Microsoft Java Virtual Machine 3809 from our website. Please see below for instructions.

Click OK to exit out of internet options, exit completely out of Internet Explorer and re-launch Paragon.

## Downloading MS Java Virtual Machine

Type the following web address into your web address line and hit <Enter>. Save the file to your desktop.

<http://fnismls.com/support/updates/MISC/JVM/msjavx86.exe>

Once it has downloaded, close the Internet Explorer window and other program windows and then double click on the icon **MSJAVX86** to install.

You need to set Norton or McAfee Internet software to allow \*.fnismls.com web site operation.

If you need help with Internet Explorer, Norton or McAfee Settings, call 877-MLS-HELP.

Run System Checker in addition to doing the above.
